## ABSTRACT

This publication provides results of a longitudinal study of young firms and their owners. Data represent the responses of a national sample of new business owners (N=2,994) who were members of the National Federation of Independent Business in May 1985 and had been in business for no more than 17 months with the average respondent owning the business for 11 months. An 11-page summary of data discusses results pertaining to the type of people who form businesses, the firms they form, the business climate, changes in the businesses, and attitudes of owners after 3 years. Appendix I sequentially presents every survey question posed during the entire project and the new business owners' responses to them. It also presents firm or environment data that did not require the owner to respond but for which there were data from another source. Data are provided in unnumbered tables, identified in the upper left hand corner by the year in which the survey was conducted. Forty-nine pages of tables are provided. Appendix II is a note on sampling and methodology. Appendix III contains the regression results of selected "predictors" of new business survival and growth. Appendix IV consists of the three survey questionnaires used in the 3 years of the study. (YLB)

# Foreword

*New Business in America: The Firms & Their Owners* has three facets which combined make the study unique and important to the literature on entrepreneurship and new business formation. The first is that the sample used to produce the study's data focuses more carefully on young firms than does any national sample of businesses of which we are aware. No entrepreneur had been in business for more than 17 months at the time the study began. The average respondent owned the business just 11 months. A young sample such as this one is important for conducting research on new businesses. The younger the sample, the more accurate the estimated survival rates, the less the owner must rely on recall to report the firm's early activity, and the greater the number of changes that can be recorded contemporaneously. Most new business data (or samples to collect new business data) are drawn directly or indirectly from the files of Dun & Bradstreet. One research problem the D&B files create is that many firms, particularly in certain industry groups, either never enter the files or do not enter the files until well after they are established. Half of the owners in *New Business in America* owned firms that were not yet recorded in the Dun's files.

A second important facet is that the study is longitudinal, i.e., the same businesses and their owners were followed over time. This procedure is preferable to a cross-sectional analysis, i.e., a snapshot containing owners of firms of different ages, because it allows researchers to trace sequences of events within individual firms. The longitudinal procedure means that researchers are not forced to compare separate owners/businesses of different ages to make generalizations about changes over time.

Third, *New Business in America* brings together the owner and the business. Since national data is generally available only on the firm, most large new business studies focus on the organization exclusively. This project collected data on both the owner and the firm so that a more complete view of the process could be developed.

*New Business in America* was initially organized and developed by Arnold C. Cooper, Louis A. Weil, Jr., Professor of Management, Purdue University, and William C. Dunkelberg, Dean, School of Business and Management, Temple University, with the assistance of William J. Dennis, Jr., Senior Research Fellow, The NFIB Foundation. One year after the project began, Carolyn Y. Woo, Associate Professor of Management, Purdue University, joined the research team. However, many other people at Purdue, Temple and NFIB participated in important capacities. Jeffrey S. Van Hulle organized and maintained the data set; Debbi Johnson provided most of the runs for this publication; and, NFIB personnel in the San Mateo, California, office, particularly Ken Bussell, Cathi Cullop, and Joan O'Connor, played crucial roles in the data collection process. In addition, appreciation is extended to American Express Travel Related Services, Inc. for its support of this project.

The million plus pieces of data contained in *New Business in America* will require a considerable period to be thoroughly analyzed. In the interim, the authors are producing material that is being published in a variety of periodicals and conference proceedings. They anticipate completing additional analyses as rapidly as prudently possible. A list of completed papers is available from Professor Cooper.

# Summary of Results

Seventy-seven (77) percent of new businesses formed in America during the mid-1980s survived at least three years. Another 19 percent closed. Four percent were sold to new owners although it was not clear whether the transactions were "fire sales" or transfers of viable businesses. This survival estimate, developed from a national sample of 2,994 new businesses, proved somewhat higher than the survival estimates produced by David Birch (*Job Creation in America*, 1987) and the Small Business Administration (*State of Small Business*, 1989), both based on Dun & Bradstreet data sets.\*

Survival was not synonymous with growth. Just 37 percent of surviving firms added to initial employment in their first three years. About one-third of this group, 11 percent of the entire sample, could be classified as growth firms, i.e., they increased employment by at least 50 percent with a minimum increase of four employees. Forty-seven (47) percent did not change employment levels and 15 percent experienced a decline of one or more.

New business owners came from all backgrounds and all parts of the country. They had heterogeneous goals, preparation and perceptions. When first becoming an owner, they were, on average, the same age as the adult population. Both had a median age a bit under 35. Few people formed their businesses before age 25 (Question 15, Year 1 survey). But the next 15 years proved the most productive for new venture creation. Fifty-six (56) percent of all new businesses were formed by people who were between 25 and 40 years

## People Who Form Businesses

---

\*One important reason for the difference in estimates is that the average respondent in this study had been in business 11 months at the first interview (none were older than 17 months) (Question 2, Year 1 survey). The number of months already in business when first interviewed was related to survival, though not to growth, all other factors equal. Those in business five months or less when the study began had a 71 percent survival rate.

Nearly 50 percent of the sample was not yet in the Dun's files (Q 32, Yr 1). Those in the Dun's files survived at a higher rate than did those that were not. Other changes in the firm's status such as the same business with a new name (not counted as a discontinuance in this study, problematic in its treatment by the Dun's files), presumably also leads to differences in estimated survival rates across studies.

old with the 30 to 34 age group the single most productive five year interval (21 percent). Owner age was related to business survival, all factors equal. Those forming businesses later in life were more likely to see their businesses survive three years than were those who started earlier, though their businesses were not necessarily more likely to grow.

New business owners whose firms survived tended to be "stable" people. They were more frequently married than peers of the same age and sex. For example, about 82 percent of new business owner males between 30 and 34 were married compared to 70 percent of males in the same age group among the general public (Q 7, Yr 1). Often a spouse provided a second income, indirectly helping the owner finance the new firm. One in three new business owners had a spouse with a full-time job and another 11 percent had a spouse working part-time. Female business owners were more likely than males to have a working spouse (64 percent for women vs. 40 percent for men). The labor force participation rate of new business owner spouses fell several percentage points below that of the comparable age groups in the general population. However, almost 50 percent of new formations received unpaid family labor (Q 4, Yr 1), suggesting that many "idle" spouses were diligently working in the business.

Nearly half of the new business owners held only 1-3 full-time jobs (with different organizations) prior to forming their own firms and another 27 percent held 4-5 (Q 25, Yr 1). In contrast, the number of prior jobs held by those in the general population ages 30 to 34 averaged 6.7 (Hall, *AER*, Sept. 1982). The fewer prior jobs the owner held before entry, all other factors equal, the greater the likelihood of survival.

Grade school dropouts occasionally succeed in their own businesses. However, new business owners were better educated than were those of similar age in the general population. They were much less likely to leave school prior to high school graduation and much more likely to have attended college. Fifty-eight (58) percent of the sample reported some exposure to college (Q 23, Yr 1) compared to 49 percent of 30-34 year olds in the general population, the most formally educated group in the nation's history. In addition, three of five took coursework in business subjects such as accounting, management, marketing or finance (Q 23a, Yr 1). Ten (10) percent reported 13 or more such courses.

Formal academic education was not the only type of training new business owners brought to their ventures. Fifty-seven (57) percent experienced some vocational or professional training (Q 24, Yr 1). More specifically, 25 percent reported training or courses leading to a certificate or license (Q 24a1, Yr 1); seven percent received occupational training

on active military duty (Q 24a3, Yr 1); nine percent reported taking some type of high school vocational program (Q 16a2, Yr 1); 24 percent received off-site employer-sponsored training in skills/products unique to the business (Q 24a5, Yr 1); and 19 percent received off-site employer sponsored training in general business skills (Q 24a4, Yr 1). Education did not end once an individual formed the firm. Despite extraordinary demands on time, 61 percent continued their education or training while operating their businesses (Q 16, Yr 3). The most common types were trade or professional association meetings or conventions with speakers and professional exchanges (43 percent) (Q 16a4, Yr 3) and courses or seminars to learn new skills, products or techniques used in the owner's line of business (41 percent) (Q 16a 3, Yr 3). A theme recurring in the study was that the small business owners' demand for knowledge focused on industry-specific information/skills rather than general business information/skills. Moreover, neither education nor training was related to survival or growth, all factors equal.

Most new business owners brought some supervisory experience to the job. Just 19 percent reported "none" (Q 19, Yr 1). At the other extreme, 11 percent supervised managers at some point prior to business entry and 26 percent previously owned another business. Fourteen (14) percent indicated that they left their own business to enter the current firm (Q 18, Yr 1). However, supervisory experience was not related to survival. The reason appeared to be that most new business owners were more deeply involved in "doing" than in "supervising." As late as the second year of operation, nearly one in two reported spending more than 25 percent of their time selling or in direct customer contact (Q 21, Yr 2; also see, Q 18, Yr 3). A non-mutually exclusive one in four reported spending more than 25 percent of their time directly producing a product or service. In contrast, less than one in ten spent that much time managing people and virtually none spent that much time planning firm growth or arranging financing, functions typically associated with managing a business.

Doing rather than supervising also fit the owners' predisposition. Thirty-eight (38) percent felt more comfortable selling or handling technical issues than managing (Q 31c, Yr 1); 28 percent felt the opposite and the remainder expressed no preference. However, the preference for "doing" did not prevent many owners from establishing formal business controls. Forty-one (41) percent indicated that the operating controls in their business were in writing (Q 31b, Yr 1) compared to 20 percent who indicated they were not. But it was the latter group — where controls were not in writing — that was more likely to survive, all factors equal.

Two popular media topics are executives who decide to leave the corporation and form their own businesses and

unemployed people who, out of desperation, create a business (job). Neither was typical. Only 16 percent reported that their job prior to forming the business was in a large firm (1,000 employees or more) (Q 18, Yr 1), let alone employed there as an executive. The most common prior employer was another small business (100 employees or less). Just six percent reported that they had previously not been working (including new college graduates), though 24 percent indicated that they left their previous job because the job was discontinued, they were fired or they quit with no plans (Q 20, Yr 1).

New business owners are usually local people. Almost 80 percent reported that they did not move their residence to form the business (Q 16, Yr 1). Just 10 percent moved 150 miles or more. Slightly less than half had a parent or guardian who at one time owned his or her own business (Q 22, Yr 1). This experience appeared beneficial as those with a business owner parent were more likely to survive, all other factors equal.

Twenty-two (22) percent of the sample were women (Q 33, Yr 1), about the expected proportion given the exclusion of part-time ventures. Six percent were government designated minorities (Q 34, Yr 1), also about the expected proportion. Minority firms were less likely to survive and women-owned firms were less likely to grow, all factors equal.

New business owners are optimists. One of three reported that their chances of success were 10 out of 10 (Q 39, Yr 1); they couldn't miss! Another 37 percent placed their chances at 8 or 9 out of 10. In contrast, just 27 percent felt that the odds of success for someone else entering a business like theirs were 8 out of 10 or better (Q 38, Yr 1). Their optimism appeared well founded. The more optimistic the new business owner, the greater his chances of survival and growth (marginally), all other factors equal.

## The Firms They Form

Many business experts emphasize the need for planning a new business venture; others focus on the need for entrepreneurial alertness. The new business population is a product of both. Deliberate planning and decision-making is the most typical process of business entry. Forty-three (43) percent reported that they seriously considered the step for a long time and that things finally came together (Q 13, Yr 1). However, quick action to capture an opportunity was characteristic of a large number of new entries. Twenty-eight (28) percent reported relatively brief planning and decision-making time frames. This group described their entry process as "a good opportunity came along and I jumped." Thirteen (13) percent reported a short planning and deliberate decision-making process while 14 percent reported a deliberate planning and a brief decision-making process. No one entry process seemed to produce a superior survival rate.

Although the majority went through a relatively lengthy planning period prior to business entry, 87 percent reported that the time between their first business expenditure of \$500 or more and their first cash receipt (sale) was three months or less (Q 2a, Yr 1). Just three percent reported the time to be seven months or more.

About 7 of 10 new businesses (69 percent) began without partners or full-time investors (Q 17, Yr 1). Two in 10 had one partner or full-time investor and the remainder had more than one. Ten (10) percent reported less than 50 percent ownership (Q 37, Yr 1) of their firms.

Partners changed frequently during the formative years of the venture, with more losing partners than gaining them (Q 5, Yr 2 and Q 5, Yr 3). However, new businesses that initially had partners were more likely to survive and grow, all factors equal. Study data provided no reason for the greater durability of these firms, though greater initial resources (separately related to survival) and complementary expertise of the owner/partners probably played a role.

No matter what the ownership structure, most new ventures were started from scratch. Individuals started two-thirds (64 percent) of the businesses formed (Q 11, Yr 1). The other major route to business ownership, purchase of an existing firm, constituted about 30 percent of formations. The remainder involved inheritances (or purchase from a family member) and various methods of bringing an individual into the ownership structure of an existing firm. Take-over of existing firms was marginally related to survival, while start-ups were marginally related to growth, all factors equal.

Most new businesses were in the retail (46 percent) or nonprofessional service (19 percent) sectors (Q 1, Yr 1). They were also the least likely to survive and grow, all factors equal. Just 73 percent in retail and 75 percent in the services survived compared to 85 percent in the professional services, 83 percent in the financial services and 82 percent in manufacturing.

One-quarter (26 percent) began operations with some type of franchise though just 12 percent reported that at least three-quarters of their sales came from franchised goods or services (Q 10, Yr 1). The latter corresponds to the number who operated under a franchise name (11 percent) (Q 10a, Yr 1). No relationship existed between the possession of a franchise or operation under a franchise name and survival. However, a negative relationship existed between the percent of franchised sales and growth.

Most new businesses begin very small. Excluding part-time operations, only about one in ten began with ten employees or more and over half began with two or less (Q 3, Yr 1). Despite the small size of most new business operations, their markets appeared geographically large. Just one-third reported that 80 percent of their customers were lo-

cated within a 10 mile radius (Q 27, Yr 1). The fraction rose to five-sixths when the radius extended to 50 miles.

One type of very small business — home-based business — proved no more fragile than others. However, this type of small firm was less likely to grow. Just seven percent of the sample began operations in the home (Q 26, Yr 1), a vastly smaller proportion than if part-time operations had been included in the study.

A majority of new owners initially worked more than 60 hours per week in the firm (Q 5, Yr 1), reducing hours gradually by small amounts as the firm matured (Q 1, Yr 2 and Q 1, Yr 3). Those working less than 60 and more than 69 hours per week were more likely to experience a subsequent discontinuance than were those working 60 to 69 hours per week, all factors equal. They were also less likely to experience growth. Working extreme hours apparently was as unhealthy as working too few. Outside employment may be a distraction or result in non-optimal hours worked in the business; it may also be associated with businesses that were less promising from the start. The 78 percent without an outside job were more likely to survive, all factors equal, than were others (Q6, Yr 1).

New business owners appear to enjoy work. Not only did they put in long hours, but 83 percent reported that they would continue to work even if they had enough money to live as comfortably as they would like for the rest of their lives (Q 22, Yr 2). New business owners were eight percentage points more likely to make that assertion than was the general population (*Public Opinion*, Sept/Oct 1987).

The "free" labor provided by the owner and his/her family often substitutes for capital, helping make it possible to form a business with relatively little money. Nearly 50 percent of all new businesses were initially capitalized at \$20,000 or less; just over 10 percent were capitalized at \$100,000 or more (Q 35, Yr 1). While the median capital investment increased to the \$60,000 range after the first three years of operation (Q 17, Yr 3), comparatively few firms began with or soon accumulated significant financial resources. However, more initial capital was associated with higher survival though not higher growth rates, all other factors equal. Over 82 percent of those initially capitalized at more than \$50,000 survived while only 74 percent of those capitalized at less than \$20,000 were still operating after three years.

Most new business owners rely heavily on their own resources to finance their ventures. Three-quarters used their savings and one-quarter financed their firm exclusively from personal resources (Q 36, Yr 1). However, banks and other lending institutions provided some capital (in the form of loans) to about 45 percent. Family and friends helped capitalize more than one-quarter. If a business were purchased, the former owner helped finance the new venture at least

one-third of the time. Outside investors were involved in only about one new firm in 10, though firms with outside investors were more likely to grow, all factors equal. The number of new business owners who used either institutionalized venture capital or government programs was negligible.

New business owners sought counsel from a variety of sources when planning their venture with accountants and bookkeepers most often considered very important sources (46 percent) (Q 29, Yr 1). Bankers (32 percent), other business owners (28 percent), and suppliers (28 percent) were also frequently characterized as "very important." However, the relative importance of information sources changed as the business matured. While the perceived value of accountants/bookkeepers and suppliers retained their initial level of importance, most other business information sources, particularly bankers and lawyers, declined in use and importance (Q 19, Yr 2 and Q 20, Yr 3). Those who thought government sources very important were less likely to survive, all other factors equal.

Most new businesses were either very much like the organization in which the owner was just employed or very different from it. There was little between. The products/services of 31 percent of the new firms were no different than the ones sold in the organization where the new owner was most recently employed (Q 21a, Yr 1). Twenty-nine (29) percent reported the same customers (Q 21b, Yr 1) and 30 percent said the suppliers were the same (Q 21c, Yr 1). Thus, about one-third of all new ventures appeared to be direct attempts to utilize knowledge or contacts gained in existing organizations. Similarity to the owner's prior employment activity did not result in a higher survival rate, but great dissimilarity resulted in a higher discontinuance rate. Thirty-nine (39) percent reported their products or services were very different than those sold by the organization that previously employed them; somewhat fewer had a very different customer base and about the same number used very different suppliers. Thus, more than a third were total departures from the owner's prior organization.

The similarity of new ventures to those of the owner's immediate prior employer reflected the source of new business ideas. Forty-three (43) percent indicated their business idea came from a previous job (Q 14, Yr 1); another six percent indicated it came from a family business. Thus, about half of the new business ideas were drawn from the workplace. Others were drawn from the personal side of the individual's experience. For example, the second most frequent source for a new business idea was a personal interest or hobby (18 percent). The third most important source was a chance happening of some type. The initial size of the business reflected the source of the business idea. Ideas emanating from work experience usually resulted in the formation

of larger businesses; ideas emanating from hobbies or personal interests resulted in smaller ones. But if the idea came from a previous job, the business was more likely to grow, all other factors equal, than if it came from another source.

Few new business owners planned an archetypal business strategy to the exclusion of others. Most chose elements of several strategies and molded them to fit their particular firm (Q 30, Yr 1). However, new business owners were much more likely to include large doses of "better service" and a reputation for quality than other elements. Nearly 85 percent claimed that "better service" was part of their strategy; 12 percent said it constituted more than 50 percent of it. When the owner assigned more than 40 percent of the strategy to better service, the chances of the business surviving three years rose, all factors equal. Eighty (80) percent claimed a "reputation for quality" as part of their strategy, but this emphasis did not appear to result in above average survival rates. The third most common element in new business strategies was "lower prices." However, reliance on lower prices as a new business strategy was associated with higher discontinuance rates.

Two other elements of the initial strategy were related to survival. If 40 percent or more of the strategy was focused on providing previously unavailable products/services, survival chances rose. However, if 40 percent or more of the strategy focused on targeting poorly served or missed customer groups, survival chances fell.

## Business Climate

The study was conducted during a period of general economic expansion. While the business climate, as measured by the 1985 unemployment rate of each firm's state (*Statistical Abstract of the United States*), bore no relationship to either survival or growth, the change in the business climate, as measured by the 1985 unemployment rate divided by the 1987 unemployment rate, was related to both. The more rapid the business climate's improvement, the more likely businesses were to survive and grow.

Nevertheless, business owners believed their businesses and the business environment were changing, the latter in a favorable manner. Sixty-one (61) percent reported their business was changing rapidly (Q 31d, Yr 1); just 14 percent reported it wasn't. Initially, respondents forecast that the number of customers and the amount of sales in the markets they planned to serve would grow substantially over the next five years. For example, 39 percent projected average annual market sales growth to be more than 10 percent (Q 28c, Yr 1). However, after one year of experience, their forecasts waned. Just 28 percent projected average annual sales increases of 10 percent or more (Q 18c, Yr 2). Despite the retrenched market forecasts, new business owners believed that their sales were generally meeting expectations. Twenty-seven (27) percent reported sales were higher than

expected (Q 12a, Yr 2); 43 percent reported them as expected, and 29 percent reported them lower than expected. One year later, the proportions that suggested satisfaction with sales levels was about the same — 29 percent, higher than expected, 37 percent, same as expected, and 32 percent, lower than expected (Q 12a, Yr 3). No relationship existed between the magnitude of sales forecasts and survival and growth, but those who could not ("don't know") or would not (N/A) forecast their sales were more likely to cease operations, all factors equal.

The primary competitor for these new businesses was a larger firm, but one not substantially larger. Just 25 percent believed that their primary competition came from a business more than 5 times its size, though 23 percent could not identify the primary competitor (Q 14, Yr 2). Forecasts of change in the number of competitors indicated that new business owners projected modest increases (Q 23b, Yr 1 and Q 18, Yr 2). Differing from the sales forecast, the forecast of changes in the number of competitors did not change between the first and second year.

A market decline is usually a major impediment to business development. About 10 percent in each of the second and third years reported a serious market decline the prior 12 months (Q 11a, Yr 2 and Q 11a, Yr 3). Credit availability was the second most frequently encountered impediment to new business development (Q 11f, Yr 2 and Q 11f, Yr 3). Eight percent cited this impediment in the second year and six percent in the third. Other impediments considered serious were noted less frequently. However, once any impediment was determined to be serious, the likelihood of subsequent survival diminished markedly, all factors equal. Family problems represented the extreme example. While relatively few cited family problems (including health) as a major impediment, a serious family problem was highly related to subsequent discontinuance.

Businesses change as they age; some change quite dramatically. For example, by the end of the second year, 12 percent had moved business locations (Q 10c, Yr 2), 5 percent had changed business names (Q 10e, Yr 2), and 6 percent had new branches or added locations. Eight percent changed day-to-day managers in the third year (Q 6, Yr 3). Most changes were more mundane, however. Twenty-one (21) percent reported greater floor space in the second year than in the first (Q 10h, Yr 2) and 20 percent reported more in the third year than in the second (Q 10h, Yr 3).

The most common change involved major shifts in the mix of products and services. Half (50 percent) reported introducing new products and services in their second year of operation and 43 percent did so in the third year (Q 10a, Yr 2 and Q 10a, Yr 3). Meanwhile, 19 percent and 20 percent respectively dropped product lines or services (Q 10b,

## **Changes in the Businesses**

Yr 2 and Q 10b, Yr 3,

Possibly associated with the changing product/service mix were substantial changes in advertising/promotion and pricing. In the second year of operation, 32 percent increased their advertising and promotion while 17 percent reduced them (Q 10g, Yr 2). But almost an identical number raised relative prices (16 percent) as lowered them (14 percent) (Q 10f, Yr 2). The pace of change slowed in the succeeding 12 months. Just 25 percent increased advertising and promotion while 20 percent reduced them (Q 10g, Yr 3). However, the proportions making relative price changes were almost identical to the prior year (Q 10f, Yr 3).

Major changes in new businesses are frequent and usually healthy adjustments to existing circumstances. For the most part, they are not a distress signal. Major changes in products or services (either adding or dropping) were not related to either survival or growth. The same was true with changes in relative prices and advertising/promotion. Adding locations or moving the primary location were not related either. Changing business names did appear to signify trouble, however. It was related to discontinuance. Decreased business assets and reduced floor space also were negatively related to survival.

While most new businesses did not increase employment, most did increase assets. A majority reported increasing assets over the prior 12 months; 62 percent increased them after the first year and 57 percent after the second (Q 8, Yr 2 and Q 8, Yr 3). Business earnings usually financed the new assets. Almost 70 percent reinvested business earnings in the second year and nearly as many did the year following (Q 9, Yr 2 and Q 9, Yr 3). Trade credit and bank loans were also important sources of funds. By the third year, trade credit, which was rarely used to help initiate the business, became the second most frequently used source of financing. New investors were rare additions once a new business began operations.

New business owners appeared to have few illusions when they formed their businesses. At most only about 10 percent reported that any particular aspect of the business was "much more" difficult than originally expected (Q 13a-j, Yr 2). The number who claimed a particular aspect of the operation easier than expected normally outpaced the number who thought it harder than expected. For example, 24 percent said that getting financing was more difficult than expected, but 46 percent said it was easier (Q 13d, Yr 2). "Government regulation and red tape" proved the major exception. It blindsided new business owners. Thirty-three (33) percent reported the problem much more difficult than expected and another 21 percent said it was more difficult (Q 13j, Yr 2). Just 19 percent said government regulation and red tape was not as bad as they thought it would be.

"Controlling Costs" proved the only other element with at least a plurality believing it was more difficult than expected (Q 13f, Yr 2).

As the new businesses became more stable and their longevity rose, employees appeared to be among the first to benefit. Nearly three of five indicated that employee wages had increased (Q 19, Yr 3), a majority of those by more than 10 percent. Just over 30 percent increased employee benefits (Q 19a, Yr 3). The emphasis on wages was not surprising. New business owners believed the best way to motivate employees was good wages (Q 20b, Yr 2), personal/friendly relations (Q 20a, Yr 2), and shared decisions/greater responsibility (Q 20d, Yr 2). They believed the least important ways were extensive fringe benefits (Q 20c, Yr 2), close supervision (Q 20e, Yr 2), and profit-sharing (Q 20f, Yr 2).

Owners of firms surviving three years expressed few regrets over their decision to form a business. Eighty-two (82) percent said that they would still form their business even knowing then what they know now (Q 23, Yr 3). About half of that number would make major changes in the way it was done, but only 14 percent said they would not start this particular business again. Just three percent were so disillusioned that they would never form another business. Yet, many did not obtain as much personal satisfaction from the experience as they thought they would. One in five (21 percent) reported more personal satisfaction than expected and another 43 percent reported as much as expected (Q 12c, Yr 3). But one in three (32 percent) was disappointed.

A sense of accomplishment and fulfillment of the objectives that initially motivated the business formation was a source of the generally positive views that surviving owners had of their experiences. The most important motivations behind these entrepreneurial activities were to: "use my skills and abilities" (Q 40g, Yr 1), "have greater control over my life" (Q 40e, Yr 1), "build something for my family" (Q 40c, Yr 1), and "[liked] the challenge" (Q 40a, Yr 1). Three years after formation, the percentage reporting satisfaction with "using skills and abilities" (Q 22g, Yr 3), "overcoming a challenge" (Q 22a, Yr 3), "gaining more respect and recognition" (Q 22b, Yr 3), "fulfilling expectations others had of me" (Q 22f, Yr 3), and "living where and how I like" (Q 22i, Yr 3) outstripped the number originally citing them as important motivations or goals.

Disappointments accompanied the sense of accomplishment. The greatest disappointment stemmed from the lack of financial success. By a 3½ to 1 margin business owners in their third year of operation reported lower profits than originally expected (52 percent) compared to those reporting higher profits than originally expected (15 percent) (Q 12b, Yr 3). "Earning lots of money" was not one of the

## Looking Back

most frequently cited important motivations for forming a business. Less than one in five indicated it was a very important motivation (Q 40d, Yr 1). Yet, just 20 percent said they were satisfied with the return on their effort and investment. The same was true for one motivation that was originally among the most important — “building something for my family.” Seventy-four (74) percent reported “building something for my family” an important motivation when forming the business (Q 40c, Yr 1). But just 58 percent indicated satisfaction on that count (Q 22c, Yr 3).

The amount of money taken out of the business in the form of salary, draw, dividends, etc. during the third year, explained their views. While 20 percent did not answer the question, just 7 percent reported taking out \$50,000 or more in the last 12 months (Q 24, Yr 3). Twenty-three (23) percent reported taking out less than \$10,000.

New business owners were also disappointed in the control they had over their lives. Seventy-eight (78) percent saw “control over their lives” as an important motivation (Q 40e, Yr 1). But after three years of long hours, many questioned whether they control their lives or whether the business controls it for them. Just 61 percent reported satisfaction in fulfilling this objective (Q 22e, Yr 3).

Direct experience left business owners more circumspect about their children going into business for themselves than did the general public’s glamorized version of the process. One recent national poll of adult Americans showed that over 90 percent would approve of a son or daughter going into business for himself or herself (Jackson, *The American Entrepreneurial and Small Business Culture*, NFIB, 1986). New business owners were less enthusiastic. Just 54 percent would approve; 29 percent including 11 percent non-respondents were neutral; 17 percent would disapprove (Q 21, Yr 3).

After three years of business ownership, enthusiasm appeared tempered by reality. Business owners were more likely to be aware of the negative as well as the positive aspects of “entrepreneurship.” But the vast majority of survivors were glad they went into business for themselves and would do so again.

# Appendix I: Summary of Data

Appendix I sequentially presents every survey question posed during the entire project and the new business owners' responses to them. It also presents firm or environment data which did not require the owner to respond, but for which there were data from another source, e.g., legal status. These data are presented together in easily identifiable unnumbered tables.

This project involved three separate surveys in three separate years. The year in which the survey was conducted is enumerated in the upper left hand corner of every page. The top of each page also presents a row containing the headings (DISCONTINUED, SOLD, etc.). The first five headings, i.e., DISCONTINUED to the first N, relate to survival and non-survival of the business at the end of three years. The second five headings, i.e., DECLINE to the second N, relate to employee growth of surviving firms.

## Reading the Tables

The column under DISCONTINUED presents the percent of firms which were not operating at the end of three years. The column under SOLD presents the percent of firms which were sold to a new owner before the end of the three year period. The column under SURVIVED presents the percent which were still operating after three years. The figures in these three rows horizontally add to 100 percent (not presented). The column under ROW % presents the percent of respondents who provided the particular answer found in the left-hand column. The figures in the column under ROW % for each question vertically add to 100 percent (not presented). The column under "N" presents the absolute number who provided the response found in the left-hand column. Thus, the N in a particular row divided by the total N equals the ROW %.

The column under DECLINE presents the percent of surviving firms that after three years employed at least one fewer person in the third year than in the first. The column under STABLE presents the percent of surviving firms that did not change employment between the first and third year by more than a single part-time employee. The column under EXPAND presents the percent of surviving firms that added at least one employee between the first and third years,

but is not a GROW firm. The column under GROW presents the percent of surviving firms that increased employment between the first and third year by at least 50 percent with a minimum of four additional employees. The four figures in each row add to 100 percent (not presented). The column under N is the number that survived three years and for which we have data in the year of the survey being examined.

To illustrate, Question 1 of YEAR ONE asks the respondent for the industry of his major business activity. The first possible response is construction. Appendix I tells us that 219 respondents (N) or 7 percent (ROW %) of the total indicated that they were in the construction industry during their first year of operation. Of that 219 contractors, 17 percent (DISCONTINUED) did not survive the third year and 4 percent (SOLD) were sold before the end of the period. Seventy-nine (79) percent (SURVIVED) were still operating at the end of the third year. Of the 76 (N) contractors who survived and for whom we have third year data, 11 percent (DECLINE) experienced a decline in employment over the three years. Thirty-eight (38) percent (STABLE) didn't change employment for all practical purposes over the period. Twenty-nine (29) percent (EXPAND) expanded as the term was earlier defined and 22 percent (GROW) grew, also as earlier defined.

The total for the entire population is presented at the top of each page to facilitate comparisons.

## Summary Tables

### YEAR ONE

# Appendix II:

## A Note On Sampling And Methodology

Data for this study were collected from a national sample of new business owners that were members of the National Federation of Independent Business in May, 1985. No "new business" universe exists against which to compare the representativeness of the NFIB sample. However, estimates of the total population and special surveys, such as the Characteristics of Business Ownership (CBO),<sup>1</sup> suggest that the NFIB sample provides a reasonable base from which to conduct an analysis of new business in America.

The new business population in the NFIB sample and therefore the study does not include all new business entities. It omits part-time operations. Defining a part-time operation is arbitrary. It also risks the possibility of excluding some firms that eventually become substantial businesses. However, as a practical matter virtually all businesses in the NFIB sample put in more than 30 hours per week and grossed more than \$25,000 in the first year.

It would appear that the NFIB sample reasonably reflects the non-part-time new business population. While available data do not permit unqualified assertions to that effect, a few examples may be helpful. The table below compares the NFIB sample to the population (IRS data, 1985)<sup>2</sup> and the CBO 1982 survey by annual gross receipts. As expected, the population grossed more than did its newest members as represented by the NFIB sample. Also as expected, the NFIB sample, which contains corporations, grossed somewhat more than did CBO firms which do not (except Sub-Chapter S's).

---

<sup>1</sup> *1982 Characteristics of Business Owners*, Bureau of the Census, U.S. Department of Commerce, August 1987. The CBO is the Census's first effort to present data on minority and women-owned businesses and their owners as well as a comparable non-minority, male business universe. The CBO sample for purposes of the current study has two important limitations. It includes businesses of all ages and excludes corporations except for S corporations.

<sup>2</sup> The *Statistics of Income* published annually by the Internal Revenue Service provides the number of persons (including legal persons) who report business income by size of annual gross receipts. The total number of business income tax filings is dominated by proprietorships grossing less than \$25,000 per year. Most of these businesses are part-time activities. The calculations derived from these data include all corporations, partnerships and proprietorships annually grossing more than \$25,000.

Geographic location constitutes a second area of comparison. As with the size comparisons above, the data sets employed are not totally comparable. D&B's *Business Starts* series counts new establishments (not new firms or ownership changes) no matter what sized firm opens them. D&B's *New Incorporations* series counts legal incorporations whether they represent new firms or not and whether they operate as an actual business or not. However, they blend to present a useful portrait. It shows that the NFIB sample may have a slight western bias, though shifts in the population and real estate development could easily explain differentials in the South Atlantic (large firms opening many outlets and considerable real estate development) and the Plains (few new outlets and little real estate development).

The most telling comparisons, however, come from the special CBO tabulations run for this study at the Bureau of the Census. The special tabulations included only those firms that were formed in 1980 through 1982 and eliminated those whose owners worked in the business 20 hours per week or less and annually grossed less than \$25,000. The tabulations did not contain corporations. However, recognizing that new corporations are usually a little larger than new proprietorships and partnerships and that their owners have somewhat more exposure to business practice, comparisons between the CBO runs and the NFIB sample are useful. They suggest that the NFIB sample is reasonably representative. For example, the distribution of men/women and ethnic minorities/non-minorities were similar. The proportions who were married, had owned a business previously, and had taken business courses closely paralleled one another. Firms in the NFIB sample were somewhat more likely to have been purchased and had greater initial capitalization than those in the CBO data. Their owners also worked longer hours, but the differences could easily be explained by the inclusion/exclusion of corporate businesses.

Forty-six (46) percent of the original sample were retailers compared to 30 percent in the total population. But.

retail businesses turn over much faster than do those in other industries, implying that the new business population contains a greater proportion of retailers than does the mature population.

Dun's *Business Starts* (1984) series, which measures establishment openings, reported that 47 percent of business starts in 1984 were in trade (retail [35 percent] and wholesale [12 percent]) compared to NFIB's 50 percent. Given the often artificial line between wholesale and retail operations, the Dun's numbers suggest that the sample's industry distribution is reasonable. The CBO, however, placed the number of retailers at 23 percent with 8 percent unclassified. One explanation for these strikingly different numbers lies with the proportion of establishments opened by large firms. So, on balance, it is reasonable to assume that retailers are over-represented in the NFIB sample by several percentage points.

Association membership, specifically NFIB membership, introduces an element of uncertainty into the sample. However, there is no a priori reason to believe that self-selected association membership is related to any aspect of new business formation and development. The organization offers no particular benefit to any type of new business vis-a-vis any other or to any new business vis-a-vis an older one. Membership is open to all independent business owners and recruitment methods appear not to have major biases for or against any segment of the small business population.

On the membership form, each NFIB member reports the age of his or her current business. Those whose businesses were aged one year old or less received a mail questionnaire in May, 1985. After weeding out respondents who had become owners prior to 1984, the sample consisted of 2994 new business owners spread across the United States. (All

businesses in the study were formed in 1984 or the first four months of 1985.) In May, 1986, and again in May, 1987, respondents received another questionnaire. The response rate from an initial mailing and two reminders in each of the three years was virtually identical — 40 percent. If a response was not received to the second or third reminder, a postcard was mailed simply requesting the status of the business, i.e., in business, sold or discontinued operations.

Determining the status (surviving, sold, discontinued) of a firm proved a complicated process that involved survey receipt, receipt of "status" postcards from non-respondents, mail returned from the post office, and annual membership visits of NFIB field representatives. In most instances, two independent pieces of information were used to determine the status of a business. If two pieces of information contradicted one another, the response of the owner took precedence followed by a report on the field representative's annual visit. The status of only one firm of the 2994 could not be determined positively.

The first year questionnaire focused on the owner — his background and his goals — the process of business formation, and basic information on the business. The second and third year questionnaires centered on business changes which occurred the prior 12 months. The third year questionnaire also requested reflections on his or her experiences.

# Appendix III: Regression Results Of Selected “Predictors” Of New Business Survival And Growth

Survival and growth are the two most important elements in new business development. The data set allowed the authors to relate data collected in the first year with eventual survival/discontinuance and growth of the survivors. Data collected in the second year could also be related to survival/discontinuance and growth of the survivors. Since growth is contingent on survival, data collected in the third year were only relevant for exploring the factors related to growth. Thus, five fundamental sets of relationships were available to analyze.

The following diagram illustrates the relationships explored:

	Survival at the End of 3 Years	Growth at the End of 3 Years
1st Year Data	Analysis	Analysis
2nd Year Data	Analysis	Analysis
3rd Year Data	Identity	Analysis

## Relating Variables to Survival and Growth

The number of observations (n) was different in each of the five basic exploratory regression sets (two on survival three on growth). The first survival test included everyone who responded to the first year survey and whose business either survived three years or didn't survive three years (n = 2858). Respondents who owned firms that were sold during the period were excluded from the analysis (n = 136). The second survival test included everyone who responded to the first and second year surveys and whose business either survived three years or didn't survive three years (n = 1171). Each of the three growth tests included just those whose business survived three years, and who responded at least to the first and third year surveys. (Response to the first and third year surveys was necessary to obtain two points to measure employment change/growth.) Thus, the number of observations in the first growth test (responded to the first and third year surveys or first, second and third year surveys) is 877; the number for the second test (responded to the first, second and third year surveys) is

632; and, the number for the third test (responded to the first and third year surveys or first, second and third year surveys) is 877.

Survival/discontinuance is a straightforward concept. However, growth was arbitrarily defined and broken into classes in order to compensate for problems created by using small numerical bases to calculate change. The growth measure was developed based on changes in employment levels between the first year and the third year surveys. A "declining" firm was defined as one that employed at least one fewer person in the third year than in the first; a "stable" firm was defined as one that employed the same number of people in the third year as in the first, plus or minus one part-time person. This class also included non-respondents. An "expanding" firm was defined as one that added at least one employee over the period, but was not a growing firm. A "growing" firm was defined as one that employed at least 50 percent more people in the third year than in the first with a minimum absolute increase of four full-time equivalent employees.

The data set contains well over 250 independent variables ("predictors") potentially related to new business survival and/or growth. A lengthy series of regressions (not reported here) isolated those independent variables statistically related (or nearly so) to survival and/or growth in one or more of the initial runs. The procedure pared the number of independent variables to 75. Each is defined later in this appendix.

Three or four regressions are presented in the tables that follow for each of the five dependent variables. Regression 1 in each series contains the independent variables found significant or nearly significant in the initial runs. The remaining regressions attempt to separate related independent variables, e.g., employee size and initial capitalization in Year 1, and intersperse them with independent variables that either (1.) were significant with another dependent variable, e.g., franchising, or (2.) held particular interest, e.g., level of formal education. Thus, several independent variables proved to be related only to survival or growth, or were related in one year but not in another. Other independent variables were not related to any iteration of survival or growth.

It is important to emphasize that these regressions are simply exploratory, permitting the determination of multivariate effects. They do not represent tests of specific hypotheses.

Many independent variables examined in the study were related to survival and/or growth, all factors equal. However, taken together these variables explained only about 9 percent of the variance in survival and only about 7 percent of the variance in growth. These results are disappointingly meagre. More was expected given the size and diversity of

## Explaining New Business Formation and Growth

the sample, the number and type of variables examined, and the breadth of literature from which these variables were developed.

A number of reasons could explain the lack of more satisfactory results. The study may have examined factors which do not have much bearing upon new business survival and growth. The models also may be missing many critical factors (an underspecified model). Some of these may be in the literature and difficult to operationalize, e.g., Kirzner's entrepreneurial alertness. Some relevant factors may be industry specific and difficult to capture in a questionnaire intended to be relevant to entrepreneurs in a broad range of industries.

A second possibility is that the measures employed are too crude — the concepts are sound and useful, but the measuring tools are so blunt that they cloud many important distinctions. For example, one survey question attempting to determine new owners' experience with the products/services they now sell, asked for the similarity between those products/services and the ones sold in the last job. But suppose knowledge of the product/service didn't come from a job at all. Or, suppose the last job didn't involve them, but the one before did. Or, suppose the last job did involve the same products/services, but the owner didn't learn much about them. Some variables which may be important are difficult to capture in a self-administered questionnaire, e.g., the extent to which the founder is skilled in dealing with customers or in assessing markets. Overly blunt measuring tools imply the need for much greater definition of concepts (probably at the expense of breadth and cost) such as Paul Reynolds' and Brenda Miller's effort to define the business starting date in terms of first personal commitment, first employee, first sale, and first loan (financing). Unfortunately, greater definition runs into the realities of research cost and response burden including the owner's willingness to provide thoughtful responses. Under these circumstances, the trade-off is usually scope for definition.

The element of chance may be more important than many would like to think. This possibility suggests that several factors important to survival and growth occur randomly. The owner has no control over them. His sole discretion is to be alert to the opportunities chance provides. Often business owners call this phenomenon "luck" — good luck and bad luck. Most would concede that an element of chance accompanies any business venture. The issue is "how much?" It may be as some of the "population ecology" literature suggests, that backgrounds of entrepreneurs and the actions they take have little systematic relationship to the prospects

---

\*Paul Reynolds and Brenda Miller. 1987 Minnesota New Firms Study: An Exploration of New Firms and Their Economic Contributions. Center for Urban and Regional Affairs, University of Minnesota, Minneapolis, MN, 1988.

of individual firms. Environmental conditions may play a dominant role in whether individual firms survive, particularly for very small firms of the type studied here (Hrebiniak and Joyce, "Organizational Adaption: Strategic Choice and Environmental Determinism," *Administrative Science Quarterly*, September 1985). If chance plays a substantial role in success and failure or growth and non-growth, there may be substantial limits to our ability to explain the survival/growth phenomenon. Moreover, it implies that the most useful business skill is recognizing opportunities.

A fourth possibility is the important role of personal values and judgments in decisions about continuing or expanding new firms. Take two owners with identical profiles. One owner may decide to forego an expansion opportunity due to hassle or perceived risk. A second may decide to forge ahead in spite of them. A similar situation arises from the response class, "Best Alternative Available." The best alternative available may mean very different things to the people involved. One owner may continue in business because absolutely no other employment alternative is available; a second may reject alternative employment opportunities that the former would accept and also continue in business. Such considerations are particularly relevant for the large number of firms in the sample that survive, but are experiencing disappointing profits.

There is lastly the possibility of survey problems related to sampling and response which are addressed in Appendix II.

Initial comparisons from these data focused on firms (and their owners) that survived and those that did not. Despite the potential explanations for our limited ability to explain survival/discontinuance presented above, it is possible that the differences between them are very small. More productive comparisons which may help us better explain and understand the process of new business formations may lie elsewhere. One possibility is between the group of firms (and their owners) which appear to "Expand" and "Grow" and the group of firms which "Discontinue," "Decline," and are "Stable." Preliminary analysis suggests that many surviving firms more closely resemble discontinued firms than growing firms. Posing the question in this manner clearly takes the research in a direction not originally intended. But it may eventually prove the direction that tells us more about new business in America than any other

## A More Productive Comparison?

<b>Variable Definitions</b>	ADDTRN	Professional development since entry (0,1) Yes = 1.
	AGE	Age of the owner in May, 1985.
	ASSCH <sub>x</sub>	Increased assets over last 12 months (0,1) Lower = 1; x = survey year.
	BS1 <sub>x</sub>	Lower prices 40 percent or more of business strategy (0,1) Yes = 1; x = survey year.
	BS2 <sub>x</sub>	Better service 40 percent or more of business strategy (0,1) Yes = 1; x = survey year.
	BS3 <sub>x</sub>	More choices/selection 40 percent or more of business strategy (0,1) Yes = 1; x = survey year.
	BS5 <sub>x</sub>	Advertising more effectively 40 percent or more of business strategy (0,1) Yes = 1; x = survey year.
	BS6 <sub>x</sub>	Target missed/poorly served customers 40 percent or more of business strategy (0,1) Yes = 1; x = survey year.
	BS9 <sub>x</sub>	Unavailable product/service 40 percent or more of business strategy (0,1) Yes = 1; x = survey year.
	BUSCLAS	Number of business courses taken (scale, 1-5)
	BUSLOC	Business located in the home (0,1) Yes = 1.
	CAPINVST	Capital invested prior to first sale (scale, 1-8).
	CHANG	Business changing rapidly (scale, 1-5).
	CHADV <sub>x</sub>	Changed advertising over last year (0,1) Less = 1; x = survey year.
	CHFLOOR <sub>x</sub>	Changed floor space over the last year (0,1) Reduced = 1; x = survey year.
	CHPRICE <sub>x</sub>	Changed relative selling prices in last year (0,1) Lower = 1; x = survey year.
	CURRCAP	Capitalization after three years (scale, 1-9).
	DATE	Number of months operating prior to May, 1985 (scale, 1-17).
	DROP <sub>x</sub>	Major change in last year — dropped products/services (0,1) Yes = 1; x = survey year
	EDUC	Level of formal education (scale, 1-6)
	EXSLS1	Difference in first year sales and those expected in two years.
	EXSLS2	Difference in second year sales and those expected in one year
	FRAN	Percent of total sales in franchised goods/ services (scale, 1-7).
	FRANNAME	Operates under a franchise name (0,1) Yes = 1.

GOVT	Impact of government in business formation compared to expected impact (0,1) More = 1.
HOURS\	Hours worked in the business per week (0,1) 60 to 69 hrs/wk = 1; x = survey year.
IDEAJ	Business idea comes from a prior job (0,1) Yes = 1.
IND	Industry (0,1) Retail & Service = 0; Else = 1.
INFO1\	Accountants used as an information source (0,1) Not used = 1; x = survey year.
INFO4\	Government used as an information source (0,1) Not used = 1; x = survey year.
INFO10\	Courses, seminars, workshops as an information source (0,1) Not used = 1; x = survey year.
INFUNDS1	Personal resources to initially finance business (0,1) Not used = 0.
INFUNDS3	Outside investors (not friends/relatives) to initially finance business (0,1) No used = 1.
INFUNDS5	Lending institutions to initially finance business (0,1) Not used = 1.
LEF1JOL	Fired or quit prior job without specific plans (0,1) Fired/quit without plans = 1.
MGTL	Supervisory experience (0,1) None = 1.
MKTC.UST\	Expected annual growth in the market the business will serve (0,1) Don't know = 1; x = survey year.
MOTIV1	Liked the challenge a motive for business formation (scale, 1-5).
MOTIV2	Gain more respect/recognition a motive for business formation (scale, 1-5).
MOTIV9	Live where/how I like a motive for business formation (scale, 1-5).
MOVE	Moved residence to go into the business (0,1) Moved = 1
NEWEMP\	Managerial or supervisory employee(s) hired in the last year (0,1) Yes = 1, x = survey year.
NEWFUND1\	Used business earnings as a source of added funds (0,1) Yes = 1; x = survey year.
NEWFUND4\	Used institutional (bank) loans as a source of added funds (0,1) Yes = 1; x = survey year.
NEWLOC\	Major change in last year — changed location (0,1) Yes = 1; x = survey year.
NEWNAM\	Major change in last year — changed business name (0,1) Yes = 1; x = survey year.

NEWPROD\	Major change in last year — added new products/services (0,1) Yes = 1; x = survey year.
ODDYRS\	Owner's perceived odds of success (scale, 0–10); x = survey year.
OPCNTR	Business operating controls in writing (scale, 1–5).
OUTJOB	Devotes full time to the business (0,1) Has outside job = 1.
PARENT	Parent/guardian who owned a business (0,1) Yes = 1.
PARTN	One or more full-time business partners (0,1) Yes = 1.
PROBMKT	Market decline hurt business performance (0,1) Serious = 1.
PROBFAM	Family/health problems hurt business performance (0,1) Serious = 1.
PROBCRED	Getting credit hurt business performance (scale, 1–5).
RACE	Minority status (0,1) Racial minority = 1.
SAMCUST	Customers like those in last job (0,1) Very different = 1.
SAMPROD	Product/services like those in last job (0,1) Very different = 1.
SEX	Owner's sex (0,1) Female = 1.
SLSCOMP\	Sales over the last compared to expectations (scale, 1–3); x = survey year.
SPOUSE	Married (0,1) No spouse = 1.
START	Method of business formation (0,1) Took over existing firm = 1.
TAKOUT	Amount taken out of business in third year (scale, 1–7).
TECH21	Took high school vocational courses or training program (0,1) Yes = 1.
TIME1\	Time allocated to dealing with employees; x = survey year.
TIME3\	Time allocated to selling/customer contact; x = survey year.
TIME4\	Time allocated to production/service provision; x = survey year.
TIME8\	Time allocated to planning growth/change; x = survey year.
TOTEMP	Total average employment during the year (1 part-time = 1 full-time).
TOTJOBS	Number of full-time jobs with different organizations held prior to business formation.
UNEMCH	Change in the unemployment rate in the state in which the business is located between 1985 and 1987.
UNP\	Unpaid family labor (0,1) Yes = 1; x = survey year.

## Regression Results

- [9] Physician, dentist, attorney, engineer, architect, consultant, skilled nursing care facility, etc.
- [10] Other (please describe) \_\_\_\_\_

When did your firm register its first sale (under your ownership or principal management)? (Circle a year and a month)

- | YEAR               | MONTH   |         |          |  |     |
|--------------------|---------|---------|----------|--|-----|
| [1] 1980           | [1] Jan | [5] May | [9] Sep  |  | 2   |
| [2] 1981           | [2] Feb | [6] Jun | [10] Oct |  |     |
| [3] 1982           | [3] Mar | [7] Jul | [11] Nov |  | 3-4 |
| [4] 1983 or before | [4] Apr | [8] Aug | [12] Dec |  |     |

2a. How long was it between your first business expenditure of \$500 or more and your first cash receipt (sale)?

- [1] less than one month [2] \_\_\_\_\_ months between (number) 3-4

On average how many full and part-time employees do you have (including yourself)?

- \_\_\_\_\_ full-time \_\_\_\_\_ part-time 7-8 9-10

How many unpaid family members are there that work for the firm? (Include children that are paid some type of small payment)

- \_\_\_\_\_ unpaid family helpers 11

4a. How many hours per week in total do these unpaid family members work? \_\_\_\_\_ total hours of work per week 12-14

About how many hours per week do you work for the firm? \_\_\_\_\_ hours per week 15-16

In your first year of business, did/do you have:

- [1] A full-time job outside of your firm
  - [2] A part-time job outside of your firm
  - [3] Irregular work outside of your firm (exclude military reserve, etc.)
  - [4] No job outside your firm
- 17

In your first year of business, did/does your spouse or other adult family member residing with you, have an income-producing job other than working for your firm?

- |                            |                                  |    |
|----------------------------|----------------------------------|----|
| [1] No spouse at time      | [4] Yes, spouse, part-time       |    |
| [2] No, no job             | [5] Yes, other member, full-time | 18 |
| [3] Yes, spouse, full-time | [6] Yes, other member, part-time |    |

What do you estimate that your gross sales or revenues were/will be in your first year of business?

- \$ \_\_\_\_\_ 00 19-24

How large do you expect your gross sales to be in TWO years? \$ \_\_\_\_\_ 00 (gross annual sales) 25-29

What percentage of these sales came/will come from the sale of franchised goods or services?

- |               |             |             |         |    |
|---------------|-------------|-------------|---------|----|
| [1] None      | [3] 10%-24% | [5] 50%-74% | [7] All |    |
| [2] Under 10% | [4] 25%-49% | [6] 75%-99% |         | 30 |

10a. Does your firm operate under a franchise name, e.g., McDonald's, Ford, Texaco?

- [1] Yes [2] No 31

How did you become owner or principal manager of your present business?

- |   |                                |    |
|---|--------------------------------|----|
| [1] Started it                            | [4] Promoted by other owners   |    |
| [2] Purchased it (not from family)        | [5] Brought in by other owners | 32 |
| [3] Inherited it or purchased from family | [6] Other _____                |    |

When you went into your business, what were your most important goals? (Indicate with a "1" the most important goal, a "2" the next most important goal, a "3" the third most important goal and a "4" the fourth most important.)

- |   |  |    |
|---|--|----|
| _____ a. To let you do the kind of work you wanted to do  |  | 33 |
| _____ b. To avoid having to work for others               |  | 34 |
| _____ c. To make more money than you would have otherwise |  | 35 |
| _____ d. To build a successful organization               |  | 36 |
| _____ e. Other _____                                      |  | 37 |

13. Why did you go into your business at the time you did? (Mark one only.)  
 (1) A good opportunity came along and I jumped  
 (2) Had been seriously considering a long time; things finally came together  
 (3) It was the best alternative available at the time  
 (4) Thought I might someday; something happened to force my hand  
 (5) Other \_\_\_\_\_
14. Where did you get the idea to go into this kind of business? (Mark one only.)  
 (1) A prior job  
 (2) A family business  
 (3) Activities of friends or relatives  
 (4) A personal interest or hobby  
 (5) Someone suggested it  
 (6) Education or courses  
 (7) A chance happening of some type  
 (8) Other \_\_\_\_\_
15. How old were you when you became owner or principal manager of your present business? \_\_\_\_\_ years old
16. Did you move your residence in order to go into your business?  
 (1) No  
 (2) Yes, under 50 miles  
 (3) Yes, 50-150 miles  
 (4) Yes, more than 150 miles
17. Were there other full-time partners or investors involved when you became the owner or principal manager of your business?  
 (1) Yes, \_\_\_\_\_ partners (number)  
 (8) No

 (1) Worked for a large business (more than 1000 employees)  
 (2) Worked for a medium business (between 100-999 employees)  
 (3) Worked for a small business (less than 100 employees)  
 (4) Had my own business  
 (5) Worked for a non-profit organization (military, teacher, etc.)  
 (6) Not in the labor force (student, housewife, etc.)
19. Before going into your present business, what was your highest level of management experience?  
 (1) No subordinates; supervised no one  
 (2) Supervised workers (office, shop, etc.)  
 (3) Supervised one or more managers  
 (4) Managed or owned own business  
 (5) Other
20. Which best describes the major reason for leaving your previous job: (Mark one only)  
 (1) Job was discontinued (firm failed, reorganized, etc.)  
 (2) Was laid off, fired, or on strike  
 (3) Quit, without specific plans  
 (4) Quit because of plans for the current business  
 (5) Left, closed down, or sold my own firm  
 (6) No previous job or already with this firm
21. How different is your present business from the organization you were just in? (Please indicate the degree of difference on a scale of 1 for "no difference" to 5, "very different")
- |                        | No<br>Difference | 1 | 2 | 3 | 4 | Very<br>Different |
|------------------------|------------------|---|---|---|---|-------------------|
| a) Product or Services | 1                | 2 | 3 | 4 | 5 |                   |
| b) Customers           | 1                | 2 | 3 | 4 | 5 |                   |
| c) Suppliers           | 1                | 2 | 3 | 4 | 5 |                   |
22. Did your parents (or guardians) ever own their own business?  
 (1) Yes  
 (2) No
23. What level of formal education did you have before you went into your current business? (Do not include a degree or certificate earned in a vocational or technical school.)  
 (1) Less than high school  
 (2) Some high school  
 (3) High school graduate  
 (4) Some college; no degree  
 (5) Some college, associates degree  
 (6) Bachelors degree  
 (7) Some graduate school  
 (8) M.B.A.  
 (9) Other advanced degree  
 (10) Other \_\_\_\_\_
- 23a. How many courses did you take in business subjects, e.g. management, marketing, personnel, finance, accounting?  
 (1) None  
 (2) 1 or 2  
 (3) 3 to 6  
 (4) 7 to 12  
 (5) 13 or more
24. Have you taken any technical, vocational, or professional development courses or training?  
 (1) Yes  
 (2) No
- 24a. If "yes," which describe(s) that course(s) or training? (Mark all that apply)  
 (1) A structured program leading to a certificate, degree or license  
 (2) High school vocational courses  
 (3) Occupational training received on active military duty  
 (4) Occasional courses to learn business skills useful in just about any kind of business  
 (5) Occasional courses to learn new skills, new techniques, new products, etc., found in my kind of business  
 (6) On site employer (non-military) sponsored training to learn business skills useful in just about any kind of business.  
 (7) On-site employer (non-military) sponsored training to learn new skills, new techniques, new products, etc. found in that kind of business.

How many full-time jobs (with different organizations; count military service as one job) did you hold from the time you left school until you entered your current business?

\_\_\_\_\_ full-time jobs

61-62

Is your business currently located in your own home (including garage, basement, wing, etc.)?

[1] Yes

[2] No

63

Eighty percent (80%) of my business comes from customers located within a radius of

- [1] 1 mile [3] 10 miles [5] 50 miles [7] more than 100 miles  
[2] 5 miles [4] 25 miles [6] 100 miles [8] don't know

64

During the next five years, how much average change per year do you expect in the market you are trying to serve:

	Increase Over 20%	Increase 20% to 11%	Increase 10% to 5%	Unchanged (+2% to -2%)	Decrease (-3% or more)	Don't Know	
a) The number of customers will:							
b) The number of competitors will:							
c) Total sales for all firms providing my kind of product/services will:							

65

66

67

When you were planning your business, what sources of information or help were important to you? Please rate each source below as follows:

	Very Important	Somewhat Important	Little Importance	Not Used	
a. accountant/bookkeeper	1	2	3	4	68

c. other business owners	1	2	3	4	70
d. government programs or information sources	1	2	3	4	71
e. bankers	1	2	3	4	72
f. trade organizations	1	2	3	4	73
g. lawyers, attorneys	1	2	3	4	74
h. generally available books, manuals, etc.	1	2	3	4	75
i. franchisors or suppliers	1	2	3	4	76
j. courses, seminars, workshops	1	2	3	4	77
k. other _____	1	2	3	4	78

(please explain)

From the list below, how would you describe your business strategy? Using a TOTAL of 100 points, please assign points to each item below that reflects its importance in your business strategy. A blank is 0 points. For example, if "low prices" were your major strategy with "better service" receiving secondary emphasis, you might assign 70 points to "low prices" and 30 points to "better service" leaving the rest blank to indicate they are not receiving special emphasis in your strategy. (Please read the entire list before scoring.)

_____ Try to keep prices lower than my competitor	71-80
_____ Try to provide better service than my competitor	81-82
_____ Provide more product or service choices and selection than my competitors	83-84
_____ Try to build a better reputation for quality	85-86
_____ Try to advertise more effectively	87-88
_____ Try to target customers missed or poorly served by my competitors	89-90
_____ Select a superior location	91-92
_____ Have a better appearance or better facilities	93-94
_____ Provide a service or product otherwise unavailable	95-96
100 points TOTAL	

For each statement, write the number which indicates the extent to which you agree or disagree with each statement.

[1] Agree strongly [3] Neither agree or disagree [4] Disagree somewhat

[2] Agree somewhat [5] Disagree strongly

a) _____ Making a comfortable living is enough success	97
b) _____ In my business, operating controls and methods are in writing	98
c) _____ I am most comfortable in selling or handling technical problems rather than working on management issues	99
d) _____ My business is changing rapidly	100

Has your business been assigned a Dun & Bradstreet number?

[1] Yes

[2] No

[3] Don't know

1

What is your sex?

[1] Male

[2] Female

2

Are you or your spouse an ethnic minority as defined by the federal government?

[1] Yes

[2] No

3

What was the total amount of capital invested in your business by the time you made your first sale?

- [1] Under \$5,000 [4] \$20,000-\$49,999 [7] \$250,000-\$499,999  
[2] \$5,000-\$9,999 [5] \$50,000-\$99,999 [8] \$500,000 or more  
[3] \$10,000-\$19,999 [6] \$100,000-\$249,999

4

36. Of the above amount, please indicate approximately what percentage of the original funds invested in your firm came from:
- \_\_\_\_ % Your personal savings
  - \_\_\_\_ % Friends or relatives
  - \_\_\_\_ % Individual investors (not friends or relatives)
  - \_\_\_\_ % Government or government guaranteed loans
